

3D printing of glass structures for new surgical tools

Yves Bellouard & Charles Baur

An extended campus

Geneva - Campus Biotech

- Bio- and neuroengineering (Wyss center)
- Human Brain Project
- Center for neuroprosthetics

- 320 staff
- 9 chairs
- 26,000 m²

Neuchâtel - Microcity

- Microengineering and nanotechnologies

- 230 staff
- 11 chairs
- 8035 m²

Fribourg - Smart Living Lab

- Building technology and sustainable architecture

- 19 staff
- 2 chairs + 1 RG*
- 1370 m²

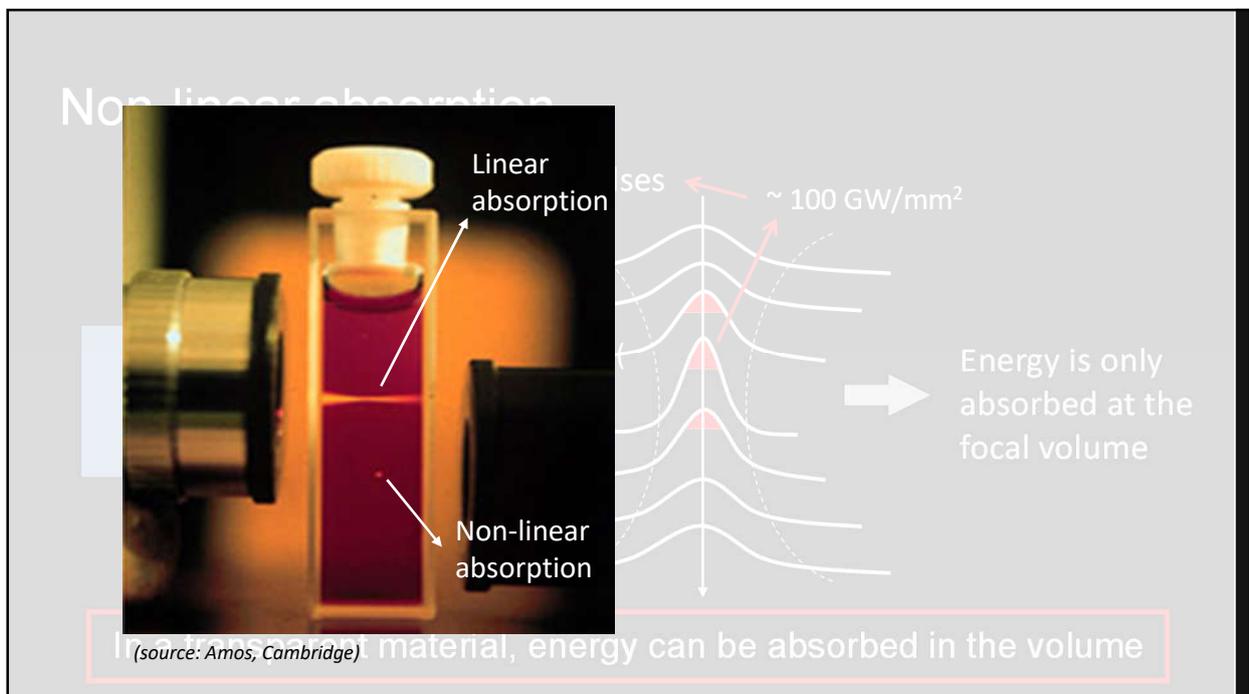

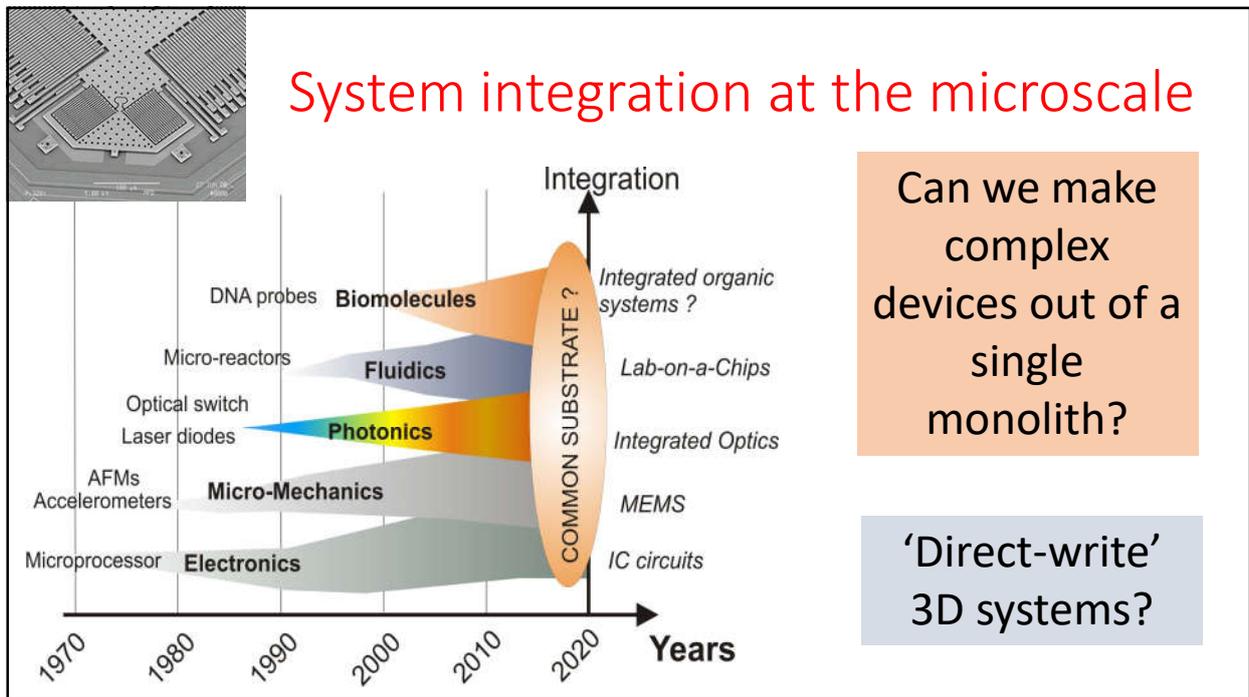

Sion - Energypolis Campus

- Industrial energy
- Green chemistry
- Environmental engineering
- Biotechnology
- Bioengineering

- 176 staff
- 10 chairs + 3 RG*
- 7600 m²

* Research groups

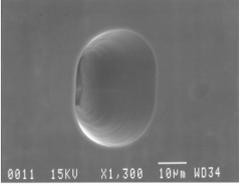

Femtosecond laser applied to fused silica leads to a variety of effects...

(Translume Inc.)

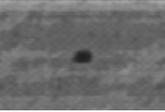

- ✦ Local increase of refractive index
K. M. Davis et al., Opt. Lett. 21, 1729-1731 (1996).
K. Miura et al., Appl. Phys. Lett. 71, 3329 (1997).
- ✦ Increase of etching rate in HF or KOH
Y. Kondo et al., Jpn. J. Appl. Phys. 37, L94 - L96 (1998)
A. Marcinkevicius et al., Opt. Lett. 26, 277-279 (2001)
S. Kiyama, et al., J. of Phys. Chem. C 113, 11560-11566 (2009)
- ✦ Form birefringence
E. Bricchi, B. G. Klappauf, and P. G. Kazansky, Opt. Lett. 29, 119-121 (2004).
- ✦ Melt (cumulative regime)
C. Schaffer, et al., Appl. Phys. A76, 351-354 (2003)
S. Eaton, et al., Opt. Express 13, 4708-4716 (2005)

0011 15KV X1,300 10µm M034

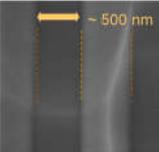

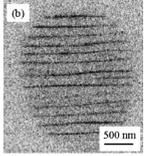

- ✦ Voids
E.N Glezer, E. Mazur, APL 71, 882 (1997).

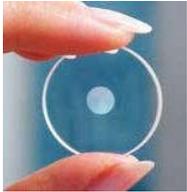

E.N Glezer, E. Mazur, APL 71, 882 (1997).

Functional integration...

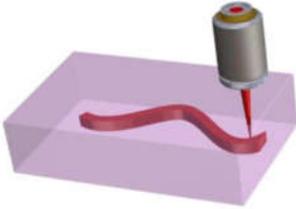

- 
 - 'Homogeneous' → Waveguides, Gratings, ...
- 
 - Nanogratings → 3D machining, Controlled birefringence, ...
- 
 - Cumulative regime → Weld joints, Self-organized gratings,...

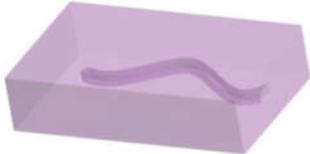

3D-machining in glass with femtosecond laser processing

1/ Laser exposure (**no ablation**)

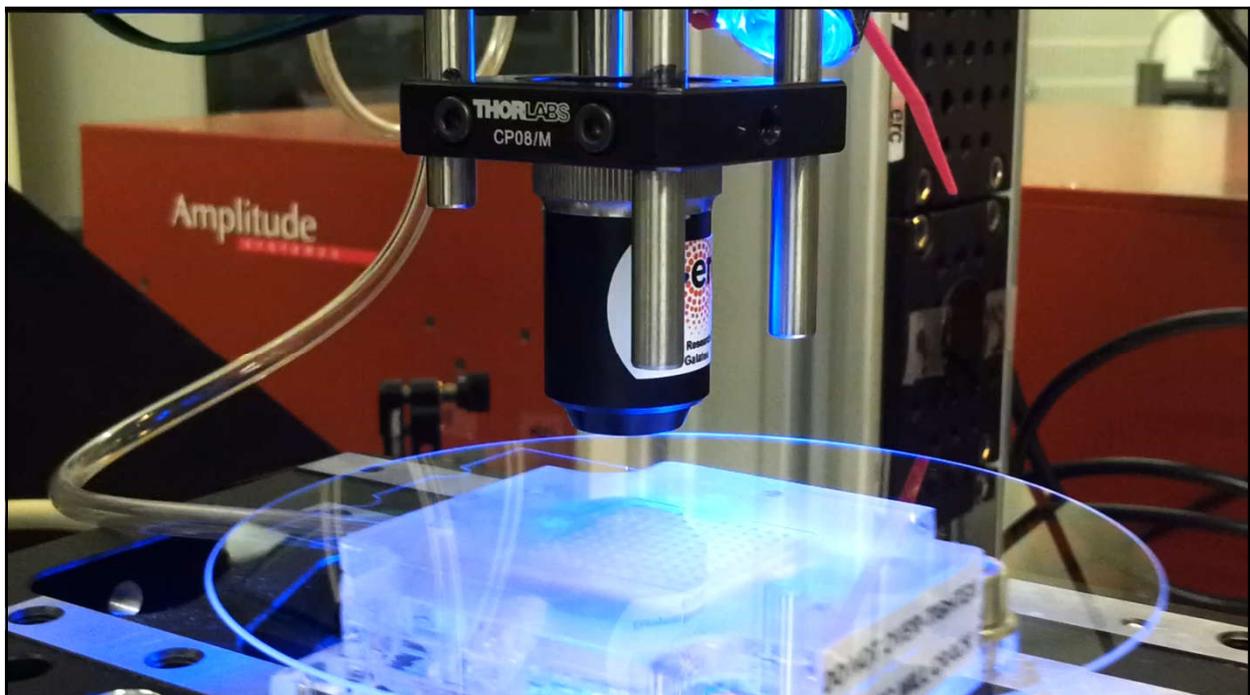

- Femtosecond laser exposure (Ti-Sapphire, ~ 100 fs pulses, 250 kHz rep-rate, **low-pulse energy** $< 1 \mu\text{J}$) – “Exposure” (both fluidic and waveguide) and (Yb) 500fs pulses, 870kHz

2/ Chemical etching (**development step**)

- Etching in a low concentration HF bath (2.5 to 5%) or KOH

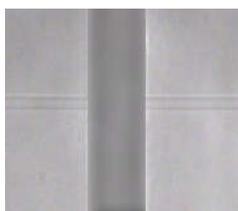

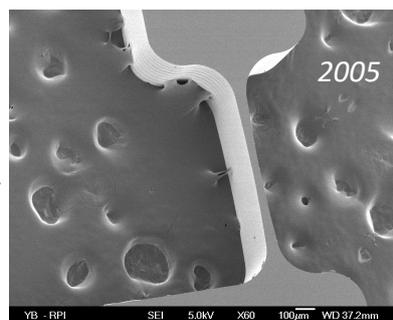

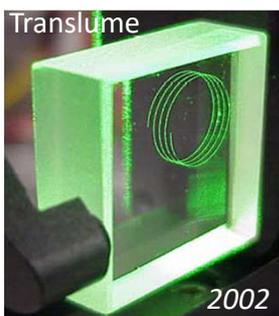

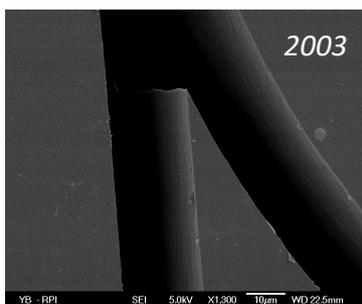

Y. Bellouard, A. Said, M. Dugan, P. Bado, Optics Express, 12, 2120-2129 (2004).

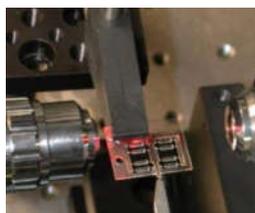

Applications in three-d microfabrication

Multifunctional integration

“Optofluidics”

Photodetector signals

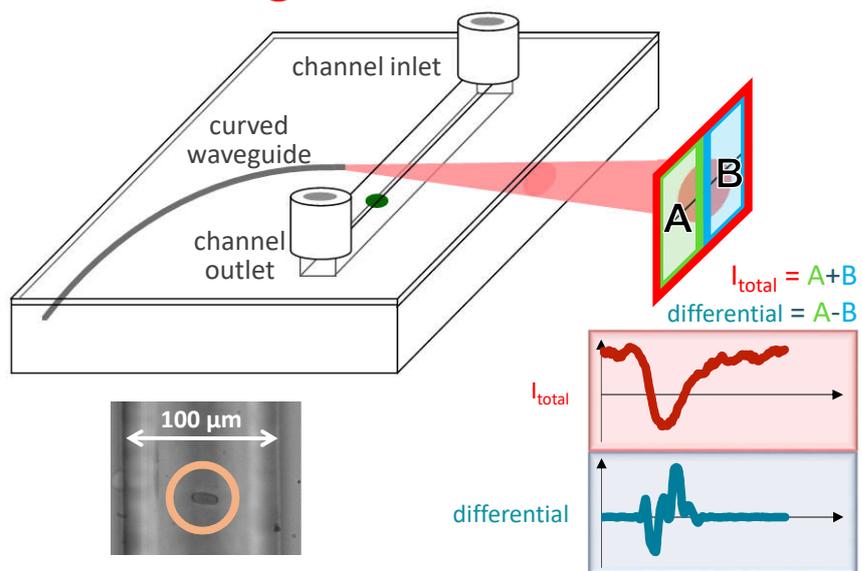

Photodetector signals

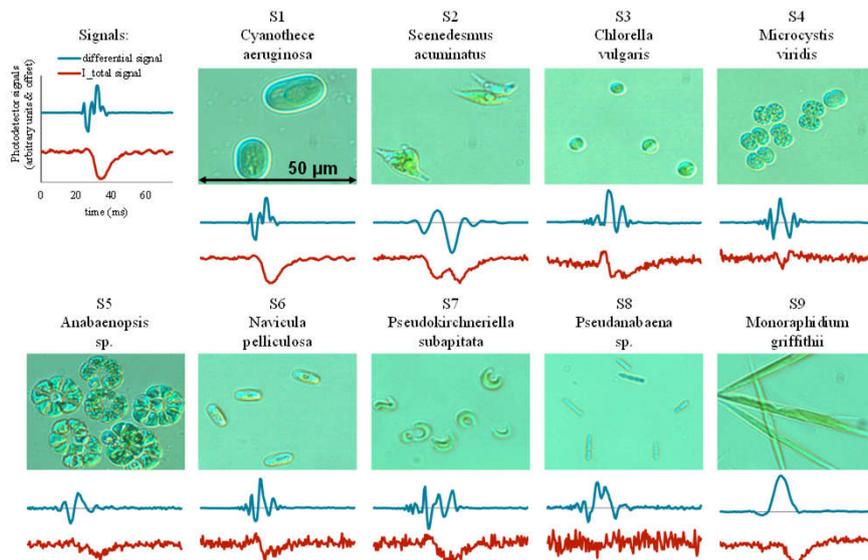

Photodetector signals

Photodetector signals

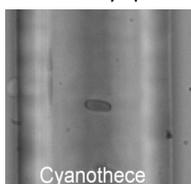

Phytoplankton library

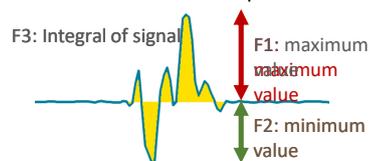

Species classification: neural networks

1. identify species

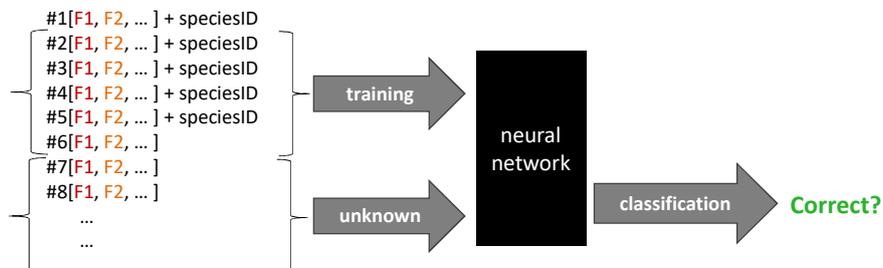

2. Extract features of each photodiode signal

F4: Integral of rectified signal / max. value

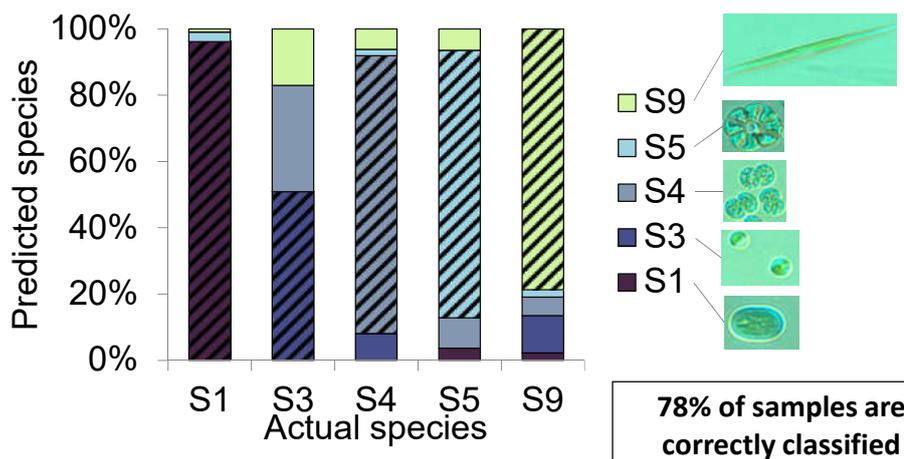

3. Put photodiode signal features into neural network

Results: species classification

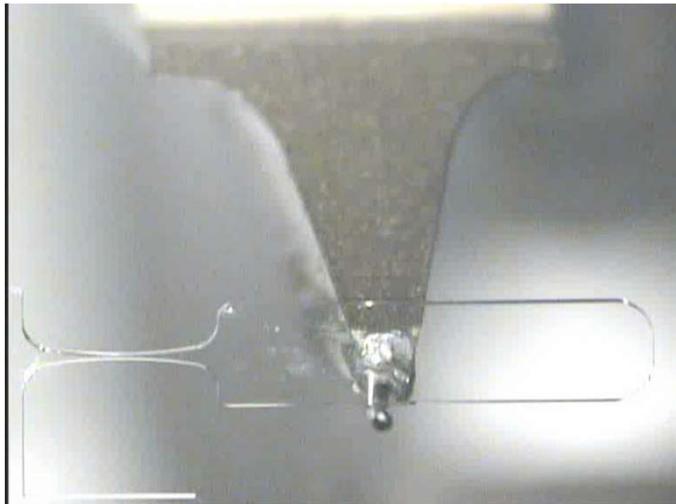

Sample: five mixed species of phytoplankton, ~100 per species

Classification: neural network pattern matching

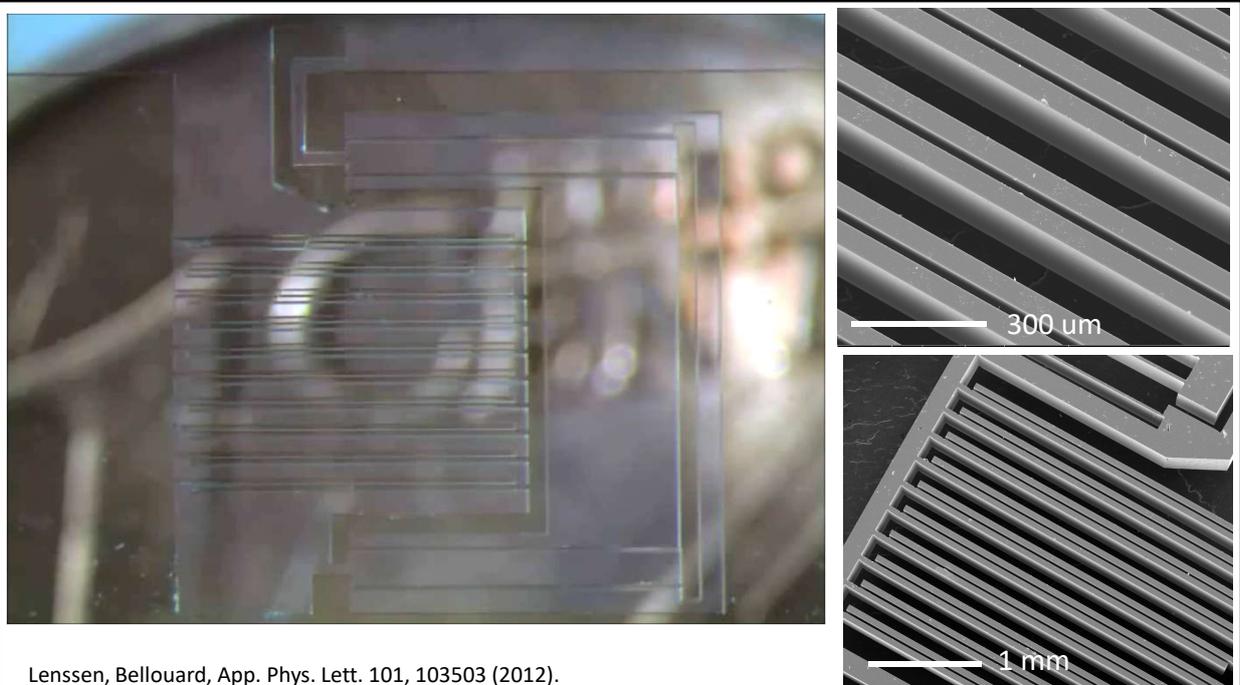

Actuators

Fused silica flexures and micromechanisms

Stress > 2 GPa demonstrated

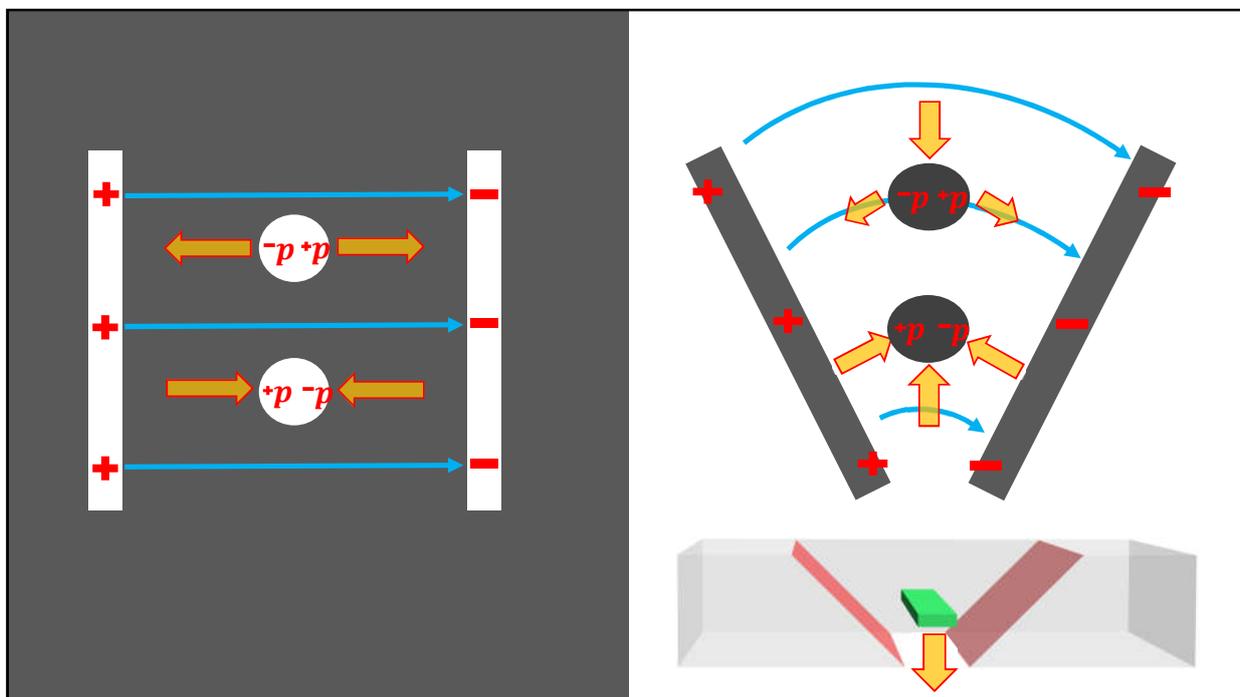

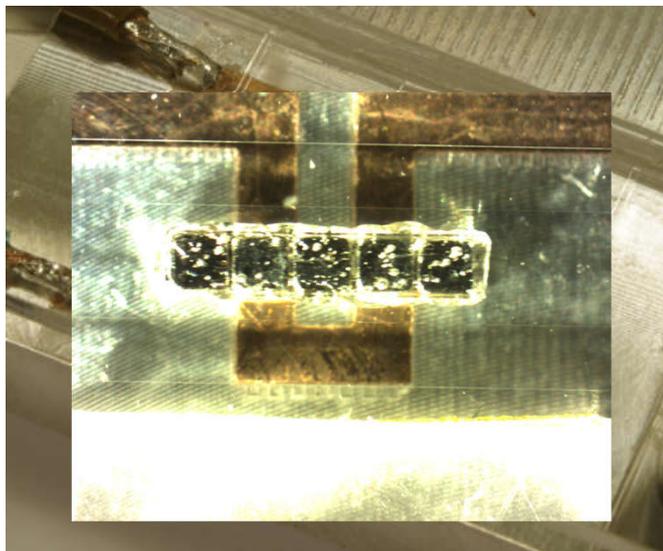

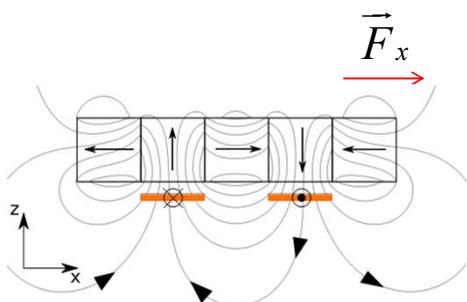

Opt. Mater. Express (2011).

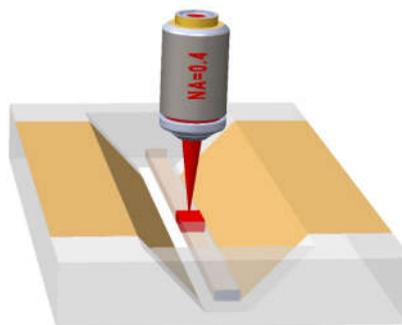

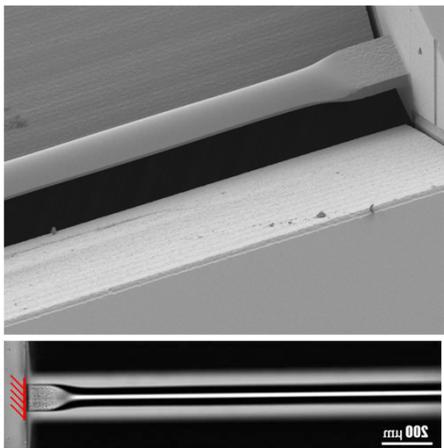

Lenssen, Bellouard, App. Phys. Lett. 101, 103503 (2012).

Magnetically-driven Actuator

- Single side desing
- Halbach magnets array
- Bi-lateral force

Tuning of non-linear optomechanical resonator

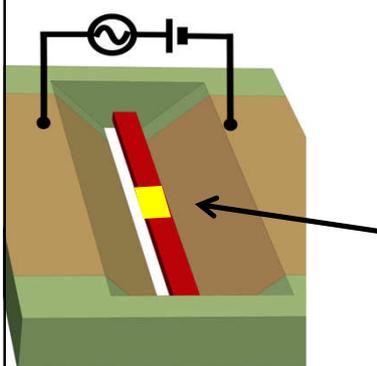

- vary stress states
- modify beam curviness

change nonlinear term k

T. Yang, Y. Bellouard, Phys. Rev. Appl. 7, 064002 (2017)

Tuneable resonator

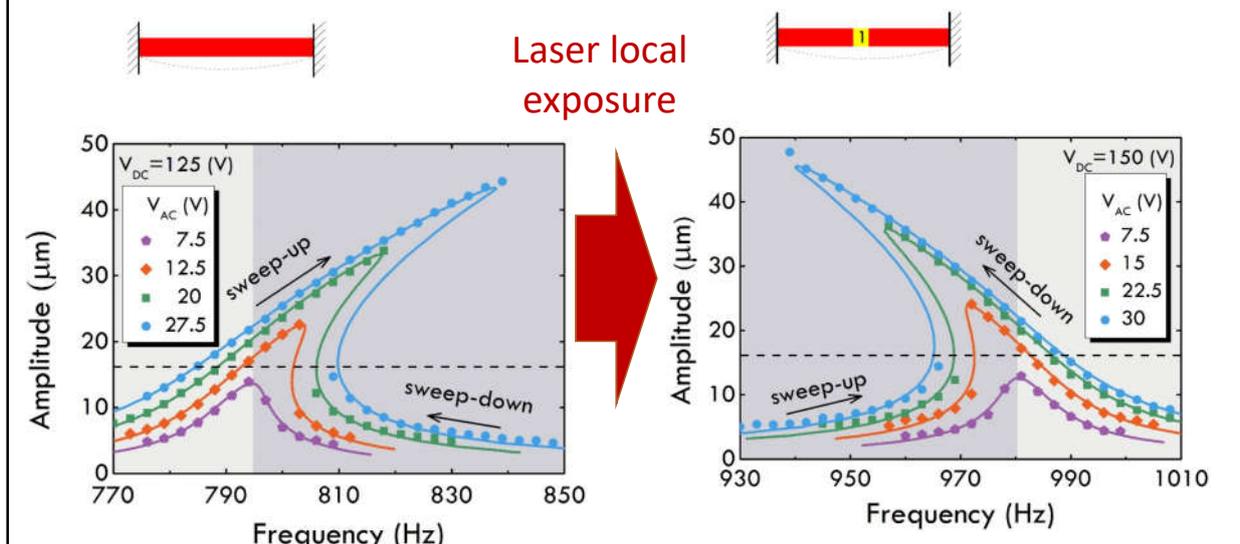

local re-exposure

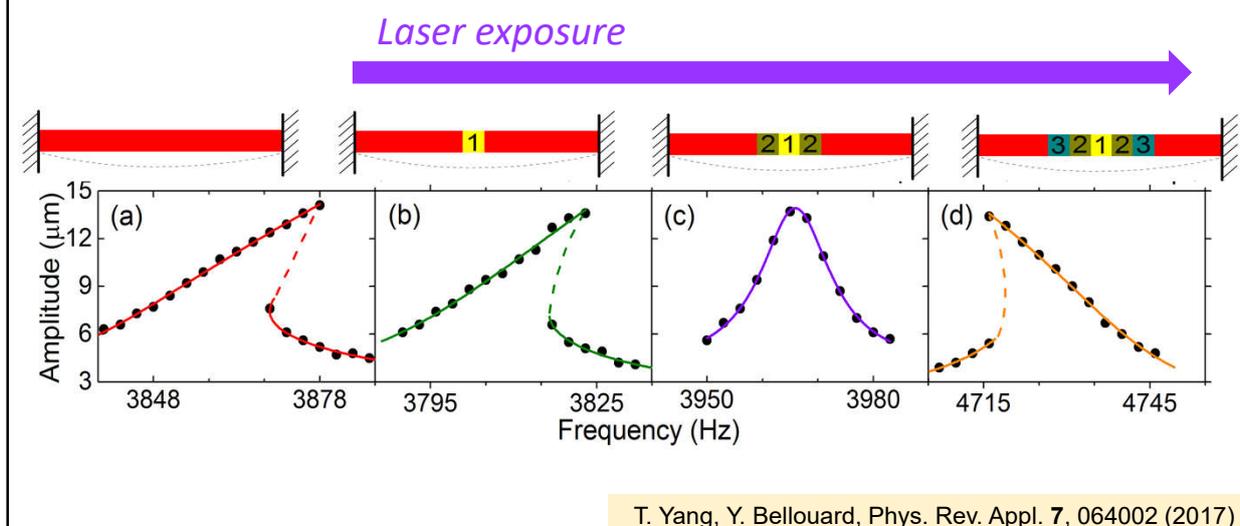

- vary stress states
- change beam volume
- modify beam shape

T. Yang, Y. Bellouard, Phys. Rev. Appl. 7, 064002 (2017)

Tuning of non-linear opto-mechanical resonator

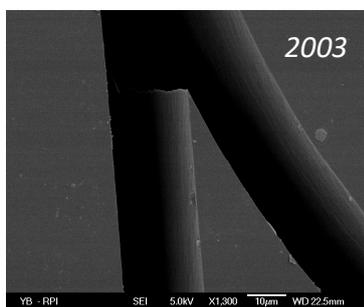

From hardening to linear, to softening dynamical response...

How about commercialization?

A process becoming commercial...
